

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Southern California fern notes

GEORGE L. MOXLEY

May 30, 1911, in company with my son, I went into the Little Santa Anita canyon in quest of *Cystopteris fragilis* (L.) Bernh. and such other ferns as we might find. We went at once to the station I had discovered two years earlier for *C. fragilis* and found the fern quite plentiful and in good condition. I gathered quite a quantity.

Then determining upon following the canyon part way down, instead of keeping to the trail, we found in less than a quarter of a mile, just below a large clump of *Woodwardia radicans* (L.) Sm., which was growing plentifully on the side of the mountain, a number of clumps of *Adiantum pedatum* L., a fern that I did not know was growing in this section of the country. To say that I was delighted with our find but feebly expresses my feelings.

I shall not attempt to express how I felt, but leave it to the imagination of you who have suddenly stumbled upon something that you had never seen growing in its native wilds, and did not suppose was found within hundreds of miles.

We also collected a few specimens of some of our commoner ferns and came home tired but well satisfied with the results of our trip.

LOS ANGELES, CAL.
